Dental Implant Restorative Course & Career Pathways – Hands-On Training, CPD & Education Opportunities

Course Description

Step confidently into implant dentistry with our hands-on evening course for UK dentists new to implants! Hosted at Notting Hill Dental Practice and supported by Neoss, this 3-hour session covers the essentials of restoring single dental implants. Learn in a supportive, practical environment—ask questions, build skills, and enhance patient outcomes. Spaces are limited and allocated on a first-come, first-served basis.

The course is led by Oscar, a distinguished implant dentist since 2009. Trained at the Eastman Dental Institute and The Royal College of Surgeons of England, he holds an MSc in Dental Implantology and Membership in Implant Dentistry from the Royal College of Surgeons of Edinburgh. Oscar is also a tutor, supervisor, and examiner for MSc programs in dental implantology at King Juan Carlos University, Madrid, and for the Diploma of Membership in Implant Dentistry at the Royal College of Surgeons of Edinburgh.

Development Outcomes (GDC ABCD)

A: Effective communication with patients and the dental team regarding implant treatment options and care pathways.
B: Management of clinical and practical challenges in implant restoration, including risk assessment and patient safety.
C: Development of knowledge and skills in single implant restoration, impression-taking, and troubleshooting.
D: Professionalism, ethical care, and commitment to ongoing learning through discussion of career pathways and educational opportunities.

Aims

- To equip dentists new to implant dentistry with the confidence and core skills needed for restoring single dental implants.
- To bridge the gap between theory and hands-on clinical practice in implant restoration.
- To foster a supportive network of clinicians passionate about implant dentistry.

Objectives

- Understand the indications, components, and workflow for single implant restorations.
- Gain practical, hands-on experience with impression taking, abutment selection, and crown placement.
- Recognize common challenges and troubleshooting tips for successful outcomes.
- Develop communication strategies for discussing implant treatment with patients.
